

GLP-1 companion categories

Support GLP-1 patient needs and drive OTC companion product sales

As more patients begin GLP-1 therapy, independent pharmacies have an opportunity to provide practical support beyond the prescription. These companion categories align with common patient needs such as digestive comfort, hydration, nutrition, and essential supplies. Developed by Cencora, American Pharmacies members can drive awareness, basket growth, and margin opportunity across relevant OTC categories. Additionally, find *Good Neighbor Pharmacy* brand products options within these categories—delivering value for your patients while capturing higher margins.

Nutritional and metabolic support

- Vitamin B12: support energy, metabolic function, and iron levels when appropriate
- Iron: mitigate anemia risk
- Vitamin D: improve bone health, immunity, and glucose metabolism
- Vitamins A & E: support patients on reduced fat or restrictive diets
- Multi-Vitamin: address common nutritional deficiencies

Hydration and electrolytes

- Potassium & electrolyte solution: replenishment for patients experiencing nausea or vomiting
- Oral rehydration products: supports hydration and tolerance of therapy

Essential medical supplies

- Pen needles and syringes
- Alcohol prep pads

Digestive and GI

- Fiber supplements: manage constipation and GI discomfort related to appetite suppression
- Magnesium: support GI function, blood sugar regulation, and muscle health
- Anti-nausea products: mitigate nausea and improve tolerability

Protein and nutrition

- Protein powders and bars: helps patients meet nutrition needs despite reduced appetite
